

# VIEVU LE3 VIDEO CAMERA

## HELPING IMPROVE RELATIONS BETWEEN THE POLICE AND MEMBERS OF THE COMMUNITY

The purpose of the increasing use of body-worn cameras by police officers is to enhance public safety, help reduce the incidence of complaint-generating events and improve relations between the police force and the public. A study conducted by the Rialto, CA police department showed an 88% decline in complaints filed against police officers wearing a video camera.

Another study sponsored by the International Association of Chiefs of Police indicates that 93% of police-misconduct cases, where video was available, resulted in the officer's exoneration; 50% of complaints were immediately withdrawn when video evidence was used; and 94% of citizens supported the use of video.

Video footage, unlike human memory, does not change over time. This objective recording of events as they unfold can greatly help investigators obtain irrefutable evidence.

## INTRODUCING VIEVU LE3

The LE3 wearable video camera is a small, lightweight, self-contained video recorder that is extremely rugged, waterproof and easy to use. This efficient camera eliminates the need for separate recorders, batteries, or cables and can easily be worn on the uniform. It contains one moving part (the on/off switch), and was designed to be easily activated with gross motor skills. It is the perfect companion for professionals who need to video document their actions.

The LE3 high definition video evidence is managed by the VERIPATROL™ software and utilizes VidLock™ security, which prevents access to the camera if lost or stolen.

## VERIPATROL MANAGEMENT SYSTEM

VERIPATROL is a fully network capable software system that allows for the retrieval, storage and management of video files for the LE3 CAMERA. A customizable retention period automatically removes unwanted videos to ensure that the storage location does not exceed maximum capacity. Videos may be marked to be saved and held electronically for an indefinite period of time.

VERIPATROL is a non-licensed system. The use of the VERIPATROL system and all future updates are provided free of charge.

## VIDLOCK SECURITY SUITE

VERIPATROL includes the VidLock Security Suite. It provides several layers of security protection to ensure chain of custody and evidence protection. Once a camera has been paired with an installation, the videos can only be downloaded to your installation. If the camera were to be lost or stolen, the video files cannot be accessed by anyone else.

## VIDEO SECURITY

VERIPATROL and the LE3 cameras employ several layers of security to prevent unauthorized access or manipulation of video files. VERIPATROL is FIPS 140-2 level 1 Compliant. The LE3 camera has no removable media; this prevents unwanted access to the video files stored on the camera. The LE3 camera utilizes a SHA cryptographic hash digital certificate to ensure the video integrity has not been compromised during the transfer.

The VERIPATROL system allows for the creation of individual user login accounts and security levels to prevent unauthorized access through the application. All video files stored in the VERIPATROL management system use a GUID mask to prevent identification of the video files and their contents by a system administrator with direct access to the file storage location.

## PROVEN BENEFITS PROVIDED BY BODY-WORN VIDEO

Body-Worn Video (BWV) can help officers across myriad situations.

“These new wearable cameras have been well received and almost immediately, they helped clear an officer during a complaint of excessive force. In light of recent complaints against law enforcement, they are invaluable to law enforcement and the public.”

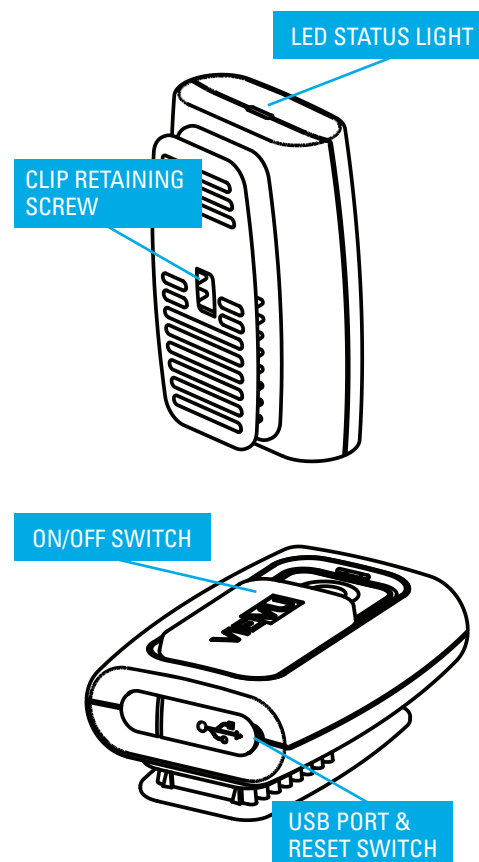

### Brian Childress

Chief of Police  
Valdosta Police Department
